how to use

QuarterShots adventures are designed to run with little to no prep. To make that easier, this file has **combat preps sheet for most of the adventures**. At the top of each page is a Quick Reference table containing the most important stats, followed by Stat Blocks containing more details, including **notes for combat strategy or flavor**.

Like the adventures, **everything here is meant to be modified** as needed. Nothing should be considered sacrosanct. Change whatever you like to fit your game.

At a minimum, you'll want to modify these encounters to approximate the difficulty level you are providing for your players. **Increasing/decreasing the number** of creatures, **modifying bonuses** and **adjusting hit points (HP)** are quick ways to do this.

In the Stat Blocks, a creature's HP is shown as the average followed by the dice formula. While many GMs just use average HP, or roll for random, **for combat balance** you'll probably want to **pick an appropriate HP between the min and max possible**.

In the Quick Reference tables, **HP is represented as tickboxes** so you can *mathlessly* check off damage taken. They are presented in groups of 5 HP, with up to 20 HP per line.

Name	AC	INIT	SPD	ATTACK	HIT	RANGE	DAMAGE	#	HP
(2) Bandits	13	+1	30	Scimitar Shortbow	+3	5 80/320	4 (1d6+1)	1	□□□□□ □□□□□ □□□□□ □□□□□
							5 (1d8+1)	2	□□□□□ □□□□□ □□□□□ □□□□□

The darkest tickboxes represent the **minimum possible HP**.

The darkest and medium together represent the **average HP**.

If all the tickboxes are used, you'll get the **maximum possible HP**.

If you're a novice GM, getting combat right can be stressful. Just take your time, and don't worry if you get something wrong. Most of the time you'll be the only one who notices anyway. Really, the only important thing is that **you and your players have fun!**
